

UEA University of
East Anglia

**Norfolk and Norwich
University Hospitals**
NHS Foundation Trust

The following open access data repository demonstrates the numerical differences between the reference methods of CMR for volumes and the clinical standard of fluid filled manometer assessment for pressure, against either beat-by-beat or average loop assessment of PV loop traces from the impedance catheter.

Data were collected from the PREFER-CMR study (NCT: 05114785) with ethical approval via the Health Research Authority Review Board (REC: 21/NE/0149).

If further queries or clarifications are required please contact the authours for assistance:
